#### DATABASE MANAGEMENT SYSTEMS LAB

Co-requisites: Co-requisite of course "Database Management Systems"

# **Course Objectives:**

- Introduce ER data model, database design and normalization
- Learn SQL basics for data definition and data manipulation

#### **Course Outcomes:**

- Design database schema for a given application and apply normalization
- Acquire skills in using SQL commands for data definition and data manipulation.
- Develop solutions for database applications using procedures, cursors and triggers.

#### LIST OF EXPERIMENTS:

- 1. Concept design with E-R Model
- 2. Relational Model
- 3. Normalization
- 4. Practicing DDL commands
- 5. Practicing DML commands
- 6. Querying (using ANY, ALL, IN, Exists, NOT EXISTS, UNION, INTERSECT, Constraints etc.)
- 7. Queries using Aggregate functions, GROUP BY, HAVING and Creation and dropping of Views.
- 8. Triggers (Creation of insert trigger, delete trigger, update trigger)
- 9. Procedures
- 10. Usage of Cursors

# EXPERIMENT- 1 CONCEPT DESIGN WITH E-R MODEL

**AIM:** To Relate the entities appropriately. Apply cardinalities for each relationship. Identify strong and weak entities. Indicate the type of relationships (total/partial). Incorporate generalization, aggregation and specialization etc wherever required.

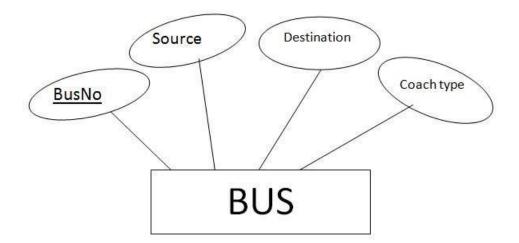

# **E-R Model**

### Bus

- BusNo
- Source
- Destination
- CoachType

# **SCHEMA**

Bus: Bus(BusNo:String, Source: String, Destination: String, Coach Type: String)

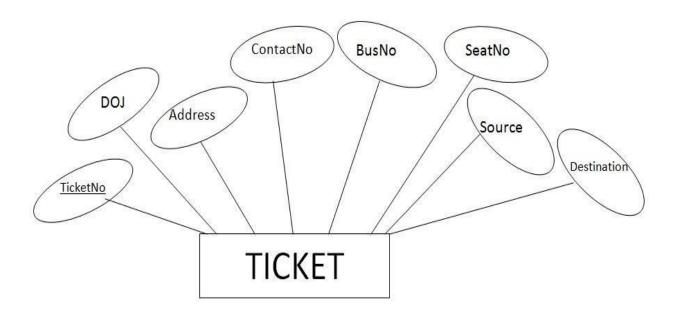

#### **Ticket**

- TicketNo
- DOJ
- Address
- ContactNo
- BusNo

- SeatNo
- Source
- Destination

#### **SCHEMA**

**Ticket** (<u>TicketNo:</u> string, DOJ: date, Address: string, ContactNo: string, BusNo:String SeatNo: Integer, Source: String, Destination: String)

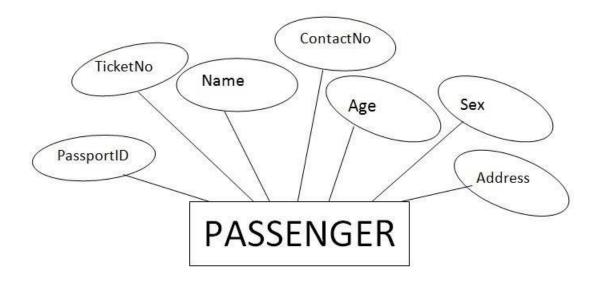

# **Passenger**

- PassportID
- TicketNo
- Name
- ContactNo
- Age
- Sex
- Address

#### **SCHEMA**

**Passenger** (<u>PassportID</u>: <u>String</u>, TicketNo :string, Name: String, ContactNo: string, Age: integer, Sex: character, Address: String)

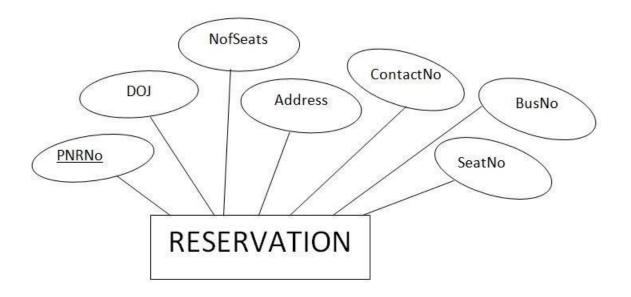

# Reservation

- PNRNo
- DOJ
- No\_of\_seats
- Address
- ContactNo
- BusNo
- SeatNo

# **SCHEMA**

Reservation(PNRNo: String, DOJ: Date, NoofSeats: integer, Address: String, ContactNo: String, ,

BusNo: String, SeatNo: Integer)

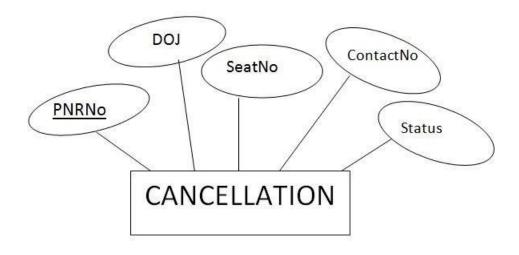

# **Cancellation**

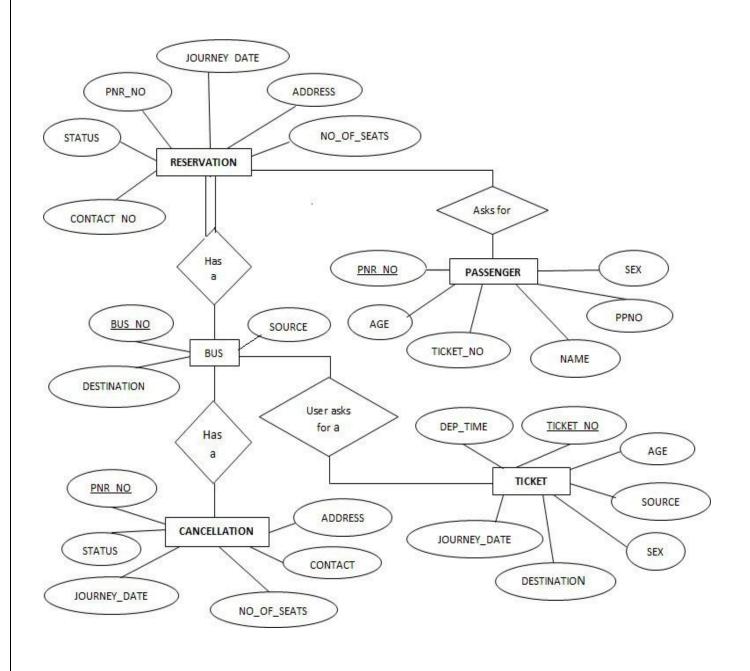

- PNRNo
- DOJ
- SeatNo
- ContactNo
- Status

# **SCHEMA**

**Cancellation** (PNRNo: String, DOJ: Date, SeatNo: integer, ContactNo: String, Status: String)

# **CONCEPT DESIGN WITH E-R MODEL**

# EXPERIMENT – 2 RELATIONAL MODEL

**AIM:** To Represent all the entities (Strong, Weak) in tabular fashion. Represent relationships in a tabular fashion.

1. **Bus:** Bus(BusNo: String, Source: String, Destination: String, CoachType: String)

ColumnName	Datatype	Constraints	Type of Attributes
BusNo	Varchar(10)	Primary key	Single-value
Source	Varchar(20)		Single-value
Destination	Varchar(20)		Simple
CoachType	Varchar(10)		Simple

Mysql>create table Bus(BusNo varchar(10),source varchar(20),Destination varchar(20),coachType varchar(10),primary key(BusNo));

Mysql>desc Bus;

```
mysql> use cse;
Database changed
mysql> create table Bus(BusNo varchar(10),source varchar(20),Destination varchar(20),coachType varchar(10),primary key(BusNo));
Query OK, O rows affected (0.06 sec)
mysql> desc Bus;
 Field
                            Null | Key | Default | Extra
               Type
 BusNo
                varchar(10)
                                    PRI
                             NO
               varchar(20)
 source
                                           NULL
               varchar(20)
 Destination
                                           NULL
 coachType
               varchar(10)
                            YES
                                           NULL
 rows in set (0.00 sec)
nysql>
```

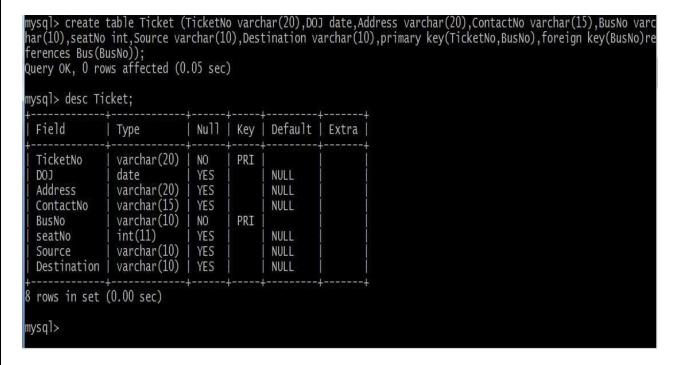

# Ticket:

**Ticket**(<u>TicketNo:</u> string, DOJ: date, Address:string,ContactNo: string, BusNo:String, SeatNo:Integer, Source: String, Destination: String)

ColumnName	Datatype	Constraints	Type of Attributes
TicketNo	Varchar(20)	Primary Key	Single-valued
DOJ	Date		Single-valued
Address	Varchar(20)		Composite
ContactNo	Integer		Multi-valued
BusNo	Varchar(10)	Foreign Key	Single-valued
SeatNo	Integer		Simple
Source	Varchar(10)		Simple
Destination	Varchar(10)		Simple

Mysql> create table ticket(ticketno varchar(20), doj date,address varchar(20),contactno int, busno varchar(20),seatno int,source varchar(10),destination varchar(10),primary key(ticketno,busno) foreign key(busno) references bus(busno);

# **Mysq**l>desc Ticket;

# **Passenger:**

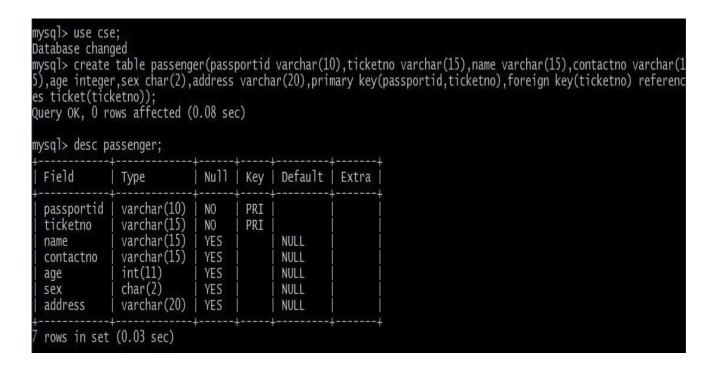

**Passenger**(<u>PassportID</u>: <u>String</u>, TicketNo:string,Name: String, ContactNo:string,Age: integer, Sex: character, Address: String);

ColumnName	Datatype	Constraints	Type of Attributes
PassportID	Varchar(15)	Primary Key	Single-valued
TicketNo	Varchar(20)	Foreign Key	Single-valued

Name	Varchar(20)	Composite
ContactNo	Varchar(20)	Multi-valued
Age	Integer	Single-valued
Sex	character	Simple
Address	Varchar(20)	Composite

Mysql> Create table passenger(passportID varchar(15), TicketNo varchar(15), Name varchar(15), ContactNo varchar(20), Age integer, sex char(2), address varchar(20), primary key(passportID, TicketNo), foreign key(TicketNo) references Ticket(TicketNo));

Mysql> desc passenger;

#### **Reservation:**

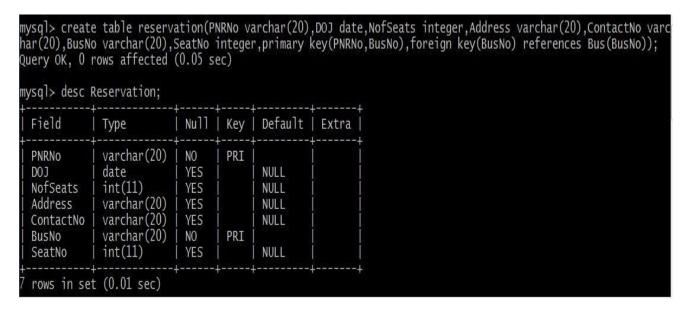

**Reservation**(PNRNo: String, DOJ: Date, NoofSeats: integer, Address: String, ContactNo: String, BusNo: String, SeatNo:Integer)

ColumnName	Datatype	Constraints	Type of Attributes
PNRNo	Varchar(20)	Primary	Single-valued
		Key	
DOJ	date		Single-valued
No_of_Seats	Integer		Simple
Address	Varchar(20)		Composite
ContactNo	Varchar(10)		Multi-valued

BusNo	Varchar(10)	Foreign Key	Single-valued
SeatNo	Integer		Simple

Mysql> Create table Resevation(PNRNo varchar(20),DOJ date,NoofSeates integer,Address varchar(20),ContactNo varchar(20),BusNo varchar(20),SeatNo integer, primary key(PNRNo,BusNo),foreign key(BusNo) references Bus(BusNo));

Mysql> desc reservation;

#### **Cancellation:**

**Cancellation** (PNRNo: String,DOJ: Date, SeatNo: integer,ContactNo: String,Status: String)

ColumnName	Datatype	Constraints	Type of Attributes
PNRNo	Varchar(10)	Primary Key	Single-valued
DOJ	date		Single-valued
SeatNo	Integer		Simple
ContactNo	Varchar(15)		Multi-valued
Status	Varchar(10)		Simple

Mysql> create table cancellation(PNRNo varchar(10),DOJ date,SeatNo integer, ContactNo varchar(15),Status varchar(10), primary key(PNRNo), foreign key(PNRNo) references reservation(PNRNo));

Mysql> desc cancellation;

mysql> create table cancellation(PNRNo varchar(10),DOJ date,SeatNo integer,ContactNo varchar(15),Status varcha r(10),primary key(PNRNo),foreign key(PNRNo) references Reservation(PNRNo)); Query OK, O rows affected (0.05 sec) mysql> desc cancellation; Null | Key | Default | Extra Field Type varchar(10) **PNRNo** NO PRI date int(11) DOJ YES NULL YES SeatNo NULL varchar(15) | YES varchar(10) | YES ContactNo | NULL Status NULL rows in set (0.00 sec)

# EXPERIMENT – 3 NORMALIZATION

**AIM:** Apply the database Normalization techniques for designing relational database tables to minimize duplication of information like 1NF, 2NF, 3NF, BCNF.

Normalization is a process of converting a relation to be standard form by decomposition a larger relation into smaller efficient relation that depicts a good database design.

- 1NF: A Relation scheme is said to be in 1NF if the attribute values in the relation are atomic.i.e., Mutli –valued attributes are not permitted.
- 2NF: A Relation scheme is said to be in 2NF,iff and every Non-key attribute is fully functionally dependent on primary Key.
- 3NF: A Relation scheme is said to be in 3NF,iff and does not have transitivity dependencies. A Relation is said to be 3NF if every determinant is a key for each & every functional dependency.
- BCNF: A Relation scheme is said to be BCNF if the following statements are true for eacg FD P->Q in set F of FDs that holds for each FD. P->Q in set F of FD's that holds over R. Here P is the subset of attributes of R & Q is a single attribute of R.

The given FD is a trival

P is a super key.

Normalized tables and
Normalized tables are:-
Mysql> create table Bus2(BusNo varchar(20) primary key,Source varchar(20),Destination varchar(20));
Mysql>Create table passenger4(PPN varchar(15) Primary key,Name varchar(20),Age integer,Sex char,Address varchar(20));
Mysql> Create table PassengerTicket(PPN varchar(15) Primary key, TicketNo integer);
Mysql> Create table Reservation2(PNRNO integer Primary key, JourneyDate DateTime,NoofSeats int,Address varchar(20),ContactNo Integer);
Mysql> create table Cancellation2(PNRNO Integer primary key, JourneyDate DateTime, NoofSeats Integer, Address varchar(20), ContactNo Integer, foreign key(PNRNO) references Reservation2(PNRNO));
Mysql> Create table Ticket2(TicketNo Integer Primary key,JourneyDate DateTime, Age Int(4),Sex char(2),Source varchar(20),Destination varchar(20),DeptTime varchar(2));

# <u>EXPERIMENT - 4</u> PRACTICING DDL COMMANDS

# **AIM: Creating Tables and altering the Tables**

**Mysql>**Create table passenger2(passportId Integer Primary Key,Name varchar(10) Not Null,Age Integer Not Null,Sex char,Address varchar(20) Not Null);

Mysql> desc passenger2;

```
mysql> create table passenger3(passportId integer primary key,name varchar(10) not null,Age Integer not null,
Sex char, Address varchar(20) not null);
Query OK, O rows affected (0.03 sec)
mysql> desc passenger3;
  Field
                             Null |
                                    Key |
                                           Default | Extra
               Type
  passportId
               int(11)
                              NO
                                     PRI
                              NO
               varchar(10)
  name
               int(11)
  Age
                              NO
  Sex
               char(1)
                              YES
                                           NULL
               varchar(20)
  Address
                              NO
  rows in set (0.02 sec)
```

#### USING ALTER COMMAND

Adding Extra column to Existing Table

Mysql>Alter table passenger3 add column TicketNo varchar(10);

```
mysql> Alter table passenger3 add col
Query OK, O rows affected (0.14 sec)
Records: O Duplicates: O Warnings: O
                                        add column TicketNo varchar(10);
mysql> desc passenger3;
  Field
                    Type
                                       Null | Key | Default | Extra

# EXPERIMENT – 5 PRACTICING DML COMMANDS

**AIM:** Create a DML Commands are used to manage data within the scheme objects.

#### **DML Commands:**

#### **INSERT COMMAND ON BUS2 & PASSENGER2 RELATIONS**

```
mysql> select * from Bus2; Empty set (0.00 sec)

mysql> insert into Bus2 values(1234,'Hyderabad','Tirupathi');

Query OK, 1 row affected (0.03 sec)

mysql> insert into Bus2 values(2345,'Hyderabad','Banglore');

Query OK, 1 row affected (0.01 sec)

mysql> insert into Bus2 values(23,'Hyderabad','Kolkata');

Query OK, 1 row affected (0.03 sec)

mysql> insert into Bus2 values(45,'Tirupathi','Banglore');

Query OK, 1 row affected (0.03 sec)

mysql> insert into Bus2 values(34,'Hyderabad','Chennai');

Query OK, 1 row affected (0.03 sec)
```

#### mysql> select \* from Bus2;

```
mysql> select * from Bus2;
Empty set (0.00 sec)
mysql> insert into Bus2 values(1234,'Hyderabad','Tirupathi');
Query OK, 1 row affected (0.03 sec)
mysql> insert into Bus2 values(2345,'Hyderabad','Banglore');
Query OK, 1 row affected (0.01 sec)
mysql> insert into Bus2 values(23, 'Hyderabad', 'Kolkata');
Query OK, 1 row affected (0.03 sec)

# EXPERIMENT – 6

Querying (using ANY, ALL, IN, Exists, NOT EXISTS, UNION, INTERSECT, Constraints etc.)

# **Aim: Practice the following Queries:**

- 1. Display unique PNR\_NO of all passengers
- 2. Display all the names of male passengers.
- 3. Display the ticket numbers and names of all the passengers.
- 4. Find the ticket numbers of the passengers whose name start with 'r' and ends with 'h'.
- 5. Find the names of Passengers whose age is between 30 and 45.
- 6. Display all the passengers names beginning with 'A'.
- 7. Display the sorted list of Passengers names

# <u>EXPERIMENT – 7</u> Querying Aggregate Functions(COUNT,SUM,AVG,MAX and MIN)

Aim: To Practice Queries using Aggregate functions for the following

- 1. Write a Query to display the information present in the passenger and cancellation tables
- 2. Display the number of days in a week on which the AP123 bus is available
- 3. Find number of tickets booked for each PNR\_No using GROUP BY CLAUSE
- 4. Find the distinct PNR Numbers that are present.
- 1. Write a Query to display the information present in the passenger and cancellation tables

MYSQL> CREATE TABLE CANCELLATION2(PNRNO INT PRIMARY KEY, JOURNEYDATE DATETIME, NOOFSEATS INT, ADDRESS VARCHAR(20), CONTACTNO INT, STATUS VARCHAR(10), FOREIGN KEY(PNRNO) REFERENCES RESERVATION2(PNRNO));

mysql> INSERT INTO CANCELLATION2 VALUES(10201,'2012-02-20 10:20:25',2,'HYD',9654235242,'CONFIRM');

mysql> INSERT INTO CANCELLATION2 VALUES(10202,'2012-02-22 10:22:25',2,'HYD',9654232451,'CONFIRM');

mysql> INSERT INTO CANCELLATION2 VALUES(10203,'2012-03-22 10:30:25',2,'DELHI',9654587960,'CONFIRM');

## MySQL> SELECT \* FROM RESERVATION UNION

#### SELECT \* FROM CANCELLATION;

```
mysql> SELECT * FROM RESERVATION2
      -> UNION
      -> SELECT * FROM CANCELLATION2;

#### **EXPERIMENT – 10**

#### **Cursors**

**Aim:** Declare a cursor that defines a result set. Open the cursor to establish the result set. Fetch the data into local variables as needed from the cursor, one row at a time. Close the cursor when done.

#### **Cursors**

In MySQL, a cursor allows row-by-row processing of the result sets. Acursor is used for the result set and returned from a query. By using a cursor, you can iterate, or by step through the results of a query and perform certain operations on each row. The cursor allows you to iterate through the result set and then perform the additional processing only on the rows that require it.

In a cursor contains the data in a loop. Cursors may be different from SQL commands that operate on all the rows in the returned by a query at one time.

There are some steps we have to follow, given below:

- □ Declare a cursor
- □ Open a cursor statement
- □ Fetch the cursor
- □ Close the cursor
- 1 . Declaration of Cursor: To declare a cursor you must use the DECLARE statement. With the help of the variables, conditions and handlers we need to declare a cursor before we can use it. first of all we will give the cursor a name, this is how we will refer to it later in the procedure. We can have more than one cursor in a single procedure so its necessary to give it a name that will in some way tell us what its doing. We then need to specify the select statement we want to associate with the cursor. The SQL statement can be any valid SQL statement and it is possible to use a dynamic where clause using variable or parameters as we have seen previously.

**Syntax :** DECLARE cursor\_name CURSOR FOR select\_statement;

**2. Open a cursor statement :** For open a cursor we must use the open statement. If we want to fetch rows from it you must open thecursor.

**Syntax**: OPEN cursor\_name;

**3. Cursor fetch statement:** When we have to retrieve the next row from the cursor and move the cursor to next row then you need to fetch the cursor.

**Synatx :** FETCH cursor\_name INTO var\_name;

If any row exists, then the above statement fetches the next row and cursor pointer moves ahead to the next row.

**4. Cursor close statement**: By this statement closed the open cursor.

Syntax: CLOSE\_name;

By this statement we can close the previously opened cursor. If it is not closed explicitly then a cursor is closed at the end of compound statement in which that was declared.

Delimiter \$\$

Create procedure p1(in\_customer\_id int) begin declare v\_id int; declare v\_name varchar(20); declare v\_finished integer default 0; declare c1 cursor for select sid,sname from students where sid=in\_customer\_id; declare continue handler for NOT FOUND set v\_finished=1; open c1; std:LOOP fetch c1 into v\_id,v\_name; if v\_finished=1 then leave std; end if; select concat(v\_id,v\_name); end LOOP std; close c1; end;

#### **USING UNION, INTERSECT, AND EXCEPT**

1). Find the names of sailors who have reserved a red or a green boat.

```
mysql> SELECT S.SNAME FROM SAILORS S,RESERVES R,BOATS B
-> WHERE S.SID=R.SID AND R.BID=B.BID
-> AND(B.COLOR='red' OR B.COLOR='green');

+----+
| SNAME |
+----+
| Dustin |
| Dustin |
| Lubber |
| Lubber |
| Lubber |
| Lubber |
| Horatio |
+----+
7 rows in set (0.01 sec)
```

#### OR

2). Find the names of sailors who have reserved both a red and a green boat.

**SELECT S.SNAME** 

FROM SAILORS S, RESERVES R, BOATS B

WHERE S.SID=R.SID AND R.BID=B.BID AND B.COLOR='red' INTERSECT

**SELECT S2.SNAME** 

FROM SAILORS S2, RESERVES R2, BOATS B2

WHERE S2.SID=R2.SID AND R2.BID=B2.BID AND B2.COLOR='green';

#### **NESTED OUERIES**

1) Find the Names of sailors who have reserved boat 103

2) Find the names of Sailors who have reserved a red Boat

3) Find the names of Sailors who have NOT reserved a red Boat

Correlated Nested Queries:

1) Find the names of Sailors who have reserved a red Boat

```
mysql> select s.sname from sailors s
    -> where EXISTS ( select * from reserves r
    -> where r.bid=103 AND r.sid=s.sid);
+-----+
| sname |
+-----+
| Dustin |
| Lubber |
+-----+
2 rows in set (0.00 sec)
```

#### **Set Comparison Operators:**

1) Find sailors whose rating is better than some sailor called Horatio

```
mysql> select s.sid from sailors s
-> where s.rating > ANY ( select s2.rating from sailors s2
-> where s2.sname='Horatio');
+----+
| sid |
+----+
| 31 |
| 32 |
| 58 |
| 71 |
| 74 |
+----+
5 rows in set (0.00 sec)
```

2) Find the sailors with the highest rating.

mysql> SELECT S.sid FORM Sailors WHERE S.rating>=ALL(SELECT S2.rating FROM Sailors S2);

#### The GROUP BY and HAVING Clauses:

1) Find the age of the youngest sailor for each rating level.

```
mysql> SELECT S.rating , MIN(S.age)
-> FROM Sailors S
-> GROUP BY S.rating;
+-----+
| rating | MIN(S.age) |
+-----+
| 1 | 33 |
| 3 | 25.5 |
| 7 | 35 |
| 8 | 25.5 |
| 9 | 35 |
| 10 | 16 |
+----+
6 rows in set (0.01 sec)
```

2) Find the age of the youngest sailor who is eligible to vote for each rating level with at least two such sailors

```
mysql> SELECT S.rating , MIN(S.age) AS minage
    -> FROM Sailors S
    -> WHERE S.age>=18
    -> GROUP BY S.rating
    -> HAVING COUNT(*)>1;
+-----+
| rating | minage |
+-----+
| 3 | 25.5 |
| 7 | 35 |
| 8 | 25.5 |
+-----+
3 rows in set (0.00 sec)
```

3) For each red boat, find the number of reservations for this boat

4) Find the average age of sailors for each rating level that has at least two sailors

```
mysql> SELECT S.RATING, AVG(S.AGE) AS AVGAGE
-> FROM SAILORS S
-> GROUP BY S.RATING
-> HAVING 1<(SELECT COUNT(*)
-> FROM SAILORS S2
-> WHERE S.RATING = S2.RATING);
+----+
| RATING | AVGAGE |
+----+
| 3 | 44.5 |
| 7 | 40 |
| 8 | 40.5 |
| 10 | 25.5 |
+----+
4 rows in set (0.01 sec)
```
